CT PARANASAL SINUSES (PNS)

OBSERVATION:

NASAL SEPTUM:

S shaped deviation of nasal septum with left sided bony spur indenting the inferior turbinate.

NASAL TURBINATES:

Bilateral inferior turbinate hypertrophy.

Left concha bullosa.

The middle and superior turbinates are normal in size and configuration bilaterally.

NASAL CAVITY & NASOPHARYNX:

No soft tissue thickening, masses, polyps, or foreign bodies are identified.

The nasopharynx appears unremarkable on the visualized portions.

PARANASAL SINUSES:

Minimal mucosal thickening in the right maxillary sinus.

Bilateral ethmoidal sinuses are clear. Bilateral frontal sinuses are clear.

Sphenoid sinus is clear.

OSTEOMEATAL COMPLEXES :

The osteomeatal complexes are patent bilaterally, with clear maxillary infundibula and middle meati.

Bilateral patent accessory maxillary ostia.

Bilateral frontal recesses are patent.

Bilateral sphenoethmoidal recesses are patent.

ACCESSORY AIR CELLS:

No significantly large accessory air cell identified.

MASTOID & MIDDLE EAR:

Mastoid air cells are normal.

No evidence of soft tissue density in both middle ears.

Name	MR.VIGNESH	Patient ID	AS_MDI_CT_15811
