

Trioangle 2.0 Plan

AI Pivot + Service ICP · Recurring Revenue Strategy

TRIOANGLE

Agenda

1. The Problem
2. The Strategic Response
3. Two-Track Strategy
4. Target Personas
5. What We Sell
6. The Numbers
7. Go-to-Market
8. Risks · This Week · Summary

The Problem

01 · The Double Problem

Market Shift

- AI-augmented dev (Cursor, Lovable, Bolt) is plateauing
- *"We build software faster"* is now commodity
- Next wave: **AI services delivered into SMB businesses**

Transactional ICP

- 800+ projects since 2015 → only **~30 still operating**
- **96% mortality** — structural to pre-revenue startup buyers
- Every month resets to zero · no compounding base

02 · The Strategic Response

Move 1 — Pivot to AI Services

Stop selling "faster software." Sell **AI features built into live platforms.**

8 verticals · 800+ deployments = the moat AI agencies can't match.

Move 2 — Fix the ICP

Recurring is a **buyer problem, not a pricing problem.**

Existing operators (12+ months live, revenue traction) have to keep building forever.

One move fixes both:

- Recurring revenue → through cadence
- Higher deal size → 3–10× ASP vs clone scripts

The Strategy

03 · Two-Track Strategy

Track 1 — Product ICP · *Cash Engine*

- Clone scripts continue per existing playbook
- AI add-on pitch at handover (opportunistic only)
- **Not the recurring engine** — accept the transactional shape

Track 2 — AI Services for Existing Operators · *Growth Engine*

- Position: **AI specialist for SMB platform operators**
- Target: Service ICP **P5 direct** · P3 & P4 channel only
- Filter: 12+ months operational, revenue traction
- **Two-axis advantage:** higher ASP *and* recurring cadence
- *Phase 0 outbound active now*

04 · Why AI-Specialist Positioning Wins

- **General software = commodity in 2026** — every dev shop offers it
- **AI engineering still requires real domain expertise**
- **Trioangle's moat:** 800+ platforms across 8 verticals
- **Operators face board pressure to ship AI now** — not "should we?" but "who can?"
- **AI lands the relationship · full-service expands it** — one account, one vendor

05 · Target Personas

Persona	Profile	Access
P5 · AI-Forward Platform Operator	CTO/CPO running a live platform — needs AI, no in-house ML	Direct
P4 · MENA Relationship	UAE/KSA family-group / Gulf-funded operating business	Channel only
P3 · Digital Transformation Enterprise	Head of Digital at offline business being disrupted	Channel only

Deprioritise P1 (Scaling CTO) and P2 (Founder-CTO) — startup-shaped, recreate the mortality risk.

06 · Why Existing Operators Generate Recurring Demand

1. **Production reality** — edge cases, payment changes, compliance shifts every quarter
2. **Competitive pressure** — competitors force the roadmap, not internal choice
3. **Successful operators expand** — new verticals, regions, payment methods
4. **Operations accumulate friction** — support backlogs become platform tweaks
5. **AI is a roadmap, not a feature** — Audit Sprint output *is* the project queue

All four ICP conditions must hold: revenue traction · competitive pressure · weak in-house · growth ambition.

07 · Land with AI, Expand with Full-Service

Land — first project is always AI

Dynamic pricing · intelligent dispatch · RAG · voice agent · AI moderation

Impress — fixed scope, fixed price, fixed date

A/B-tested business-metric lift · day-1 observability

Expand — full-service follows naturally

Web · mobile · new verticals · payment gateways · platform scaling

One account contact. One delivery brand. No vendor handoff.

What We Sell

08 · AI Services — One-Time, Outcome-Based Pricing

Service	Price	Delivery
AI Customer Support Bot	\$900–\$2,500	2 weeks
RAG Knowledge Assistant	\$1,800–\$5,000	2–3 weeks
WhatsApp AI Automation	\$500–\$1,500	1–2 weeks
AI Content Moderation	\$1,200–\$3,500	2–3 weeks
AI Search Upgrade	\$1,200–\$3,000	2 weeks
Voice AI	\$1,800–\$6,000	2–3 weeks

✗ No subscriptions · ✗ No retainers · ✗ No metric-based pricing · ✗ No SaaS

09 · The Recurring Shape — Cadence by Persona

Persona	Cadence	Per-Deal	Annual / Client
P5 · AI-Forward Platform Operator	2–4 / yr	\$15k–\$120k+	\$30k–\$240k+
P4 · MENA Relationship	2–3 / yr	\$30k–\$120k+	\$60k–\$360k+
P3 · Enterprise	1–2 / yr	\$50k–\$120k	\$50k–\$240k

Individual projects stay one-time, outcome-based.

Compounding comes from client cadence — not monthly invoices.

The Numbers

10 · Per-Deal Economics

Track	Per-Deal ASP	Annual Revenue / Client
Track 1 · Clone script	\$500–\$25k	Mostly one-time
Track 2 · Existing operator	\$25–\$60k avg (\$15–\$120k range)	\$50k–\$240k / yr

Track 2 ASP alone is **3–10× higher** before recurring compounds it.

Track 2 Multi-Year Anchor

Period	Active Clients	Projects/Client/Yr	Annual Revenue
Year 1 (post Phase 1)	4–6	2–3	\$200k–\$450k
Year 2	8–12	3–4	\$840k–\$1.7M
Year 3+	12–18	3–4	\$1.4M–\$2.9M

11 · Quarterly AI Revenue Targets

Quarter	SMB AI Revenue	Legacy	Team (AI / total)
Q1 (M1–3)	\$14k–\$42k	Baseline	2–3 / current
Q2 (M4–6)	\$30k–\$60k	85%	4–6 / 9–12
Q3 (M7–9)	\$72k–\$120k	70%	7–9 / 11–14
Q4 (M10–12)	\$120k–\$180k	55%	10–12 / 13–16
Q5 (M13–15)	\$170k–\$265k	30%	13–15 / 16–18
Q6 (M16–18)	\$240k–\$420k	<15%	15–18 / 18–22

By Year 2: Track 2 is the larger revenue line.

Go-to-Market

12 · Acquisition Funnel

Stage	Product	Price
TOFU	AI Readiness Call (1 hr)	Free
Pre-engagement P5	AI Audit Sprint (2 weeks)	\$1.5–4k <i>(credited)</i>
Pre-engagement P1/P2	Discovery Sprint (2 weeks)	\$1.5–4k <i>(credited)</i>

Do not offer either sprint to P3 (formal RFP) or P4 (relationship-built trust).

Disqualify: pre-revenue · no integration capacity · "just exploring" · <\$10k budget

13 · Acquisition Channels

- **P5 (direct primary)** — LinkedIn ABM + AI Engineering Communities
Triggers: competitor AI launch · ML job postings · investor deck mentions AI
- **P3 (channel only)** — management consulting firms with enterprise relationships
- **P4 (channel only)** — MENA consulting firms via UAE/KSA network · *WhatsApp-first*

Historical Trioangle clients are NOT a reliable channel — already approached, show interest but don't convert. Do not pitch proactively. Take only if they reach out unprompted.

14 · Repeat Business Mechanics

- **Quarterly AI roadmap reviews** — *"what's working, what's next, what's blocking"*
- **Every handover names the next project** — no separate sales cycle
- **Single account contact** across AI and non-AI work
- **CRM tracks project cadence** — *time-to-next-signed-project* is the metric

M18 targets: 3+ projects/client over 18 months · median time-to-next <4 months · 6+ new clients/yr

15 · Foundations + Defining "Shipped"

Billing

Track 2: **30% upfront · 40% mid · 30% on delivery**

AI Audit Sprint: 100% upfront · Late fee: 1.5%/month

Reputation

Vertical case studies with concrete metrics · LinkedIn from named engineers · 5 Clutch reviews

The invoice attaches the artifacts that prove the milestone shipped.

No artifacts = no invoice. Customer verifies before paying.

That's what makes Trioangle a partner, not a vendor.

16 · Top Risks

Risk	Mitigation
Pipeline gap between deals	60-day rolling pipeline visibility
Cash runs out before pivot pays off	Phase 0 quick wins · legacy pod protected
Founder capacity bottleneck	Head of Delivery hire by M6
AI champions leave	Equity / profit-share for 2–3 key people
Quality incident on shipped AI	Day-1 observability + evals · QA gate
No-code competitors eat SMB	Compete on delivery quality + domain depth

17 · This Week

1. Calculate exact runway
2. Identify 10–15 P5 targets on LinkedIn (AI-gap signals)
3. Prepare AI Readiness Call script
4. Start LinkedIn outbound to P5 — engineering hooks, not sales tone
5. Pick 2 AI champions · start learning roadmap
6. Apply for Anthropic + OpenAI startup programs
7. Draft Head of Delivery JD

18 · Summary

Track 1 · Cash Engine

Clone scripts continue · AI add-on at handover (opportunistic) · accept transactional shape

Track 2 · Growth Engine

AI specialist for SMB platform operators · P5 direct · P3 & P4 channel · 12+ months operational filter

3–10× ASP + recurring via cadence (2–4 projects/yr)

Year 2 Anchor

8–12 clients × 3–4 projects/yr × \$35k = \$840k–\$1.7M annual

Mortality Strategy

Accepted on Track 1 · structurally avoided on Track 2 via existing-operator filter
